SSP Instrumentation

It takes a team of experts working together to become a recognized leader in the instrumentation tube fitting marketplace. SSP Instrumentation combines the finest in manufacturing equipment and expertise with state-of-the-art design engineering, outstanding quality assurance, superior customer service, and an efficient inventory distribution system to accomplish the task.

SSP Fittings Corp.

Since its inception in 1926, SSP has developed into an internationally recognized manufacturer of the highest quality, machined products. This successful U.S. corporation's heritage of craftsmanship and business expertise provide the foundation for an instrumentation division specializing in providing alternatives in instrumentation quality tube fittings.

How to Order Duolok Tube Fittings

Example: ISSD4MC2

ISS	D	4	MC	2
Instrumentation Material Designator (See Chart #1)	SSP Brand Designator D = Duolok	Tube O.D. (See Chart #2)	Type of Tube Fitting (See Chart #3)	2nd end connection is required for a reduced size tube O.D. or a differing type of end connection such as MNPT, FNPT, etc. (See Chart #2)

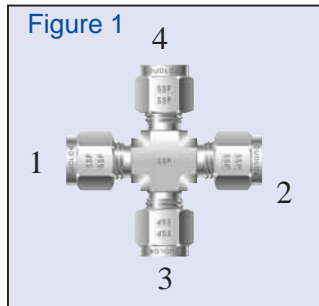

For special application tees, a 3rd end connection is required for a reduced size tube O.D. or a differing type of end connection such as MNPT, FNPT, etc. (See Chart #2)

NOTES:

All Configurations: Only one size indicator is necessary when all of the connections are the same type and size.

Straights and Elbows: Specify the largest tube end first followed by the smaller tube end or differing type of connection (MNPT, FNPT, etc.).

Tees and Crosses: Tees are described by first sizing the run (1 to 2) and then the branch (3). Crosses are described by first sizing the run (1 to 2) and then the branch (3 to 4). See Figure 1.

Specials: SSP Instrumentation manufactures a wide variety of special application tube fittings. Contact your local distributor for details regarding availability of special tube fitting configurations, materials and sizes.

Duolok Tube Fittings

DESIGN

Duolok tube fittings are designed and manufactured to provide a reliable, leak-proof connection in instrumentation and process tubing systems. **Duolok** tube fittings consist of four precision-machined components:

- 1) Body
- 2) Front Ferrule
- 3) Back Ferrule
- 4) Nut

The double ferrule design, with the staged sequential swaging action of the ferrules during make-up, compensates for the variations in tubing materials, hardness, and thickness of the tube wall to provide leak-tight connections in an extensive range of applications.

Additionally, in fulfillment of the design criteria, all **Duolok** components are manufactured with stringent tolerances and superior surface finishes under rigorous quality control standards to assure the optimum performance of each component.

OPERATION

Through the critical interaction of precision-machined fitting components with the process tube, a leak-tight seal is achieved.

The simple geometric rotation of the **Duolok** nut provides the axial thrust necessary to swage the ferrules to the outside diameter of the tube. To eliminate any

potential stress on an existing system, the tube fittings have been designed to not transmit installation torque from the tube fittings to the tubing.

During the rotary movement of the nut, the internal surface of the nut meets with the rear surface of the back ferrule to axially move the back ferrule forward against the rear angle of the front ferrule.

Simultaneously, the front ferrule is driven forward into the angular section of the fitting body where the desired “lift to seal” action of the front ferrule occurs. The back ferrule “locks” on the outside diameter of the tube to complete the sealing action and secure the tube within the fitting.

The resulting “engineered gap” between the front and back ferrule is designed to help compensate for exposure to system variables such as vibration, pressure pulsation and thermal expansion/contraction.

QUALITY

SSP's Quality System has been certified to conform to the **ISO 9001:2000 Quality Standard**. Achievement of this prestigious status further confirms SSP's continuing commitment to quality which is reflected throughout the company in its personnel, policies, equipment, products and service.

In addition, all **Duolok** tube fittings are manufactured to the technical design specifications and

rigid quality control standards of the SSP Instrumentation Division.

Statistical Process Control

techniques are employed within the manufacturing process to supply timely, meaningful feedback to the production team. Continual process monitoring and equipment control provide the necessary manufacturing quality for **Duolok** instrumentation grade tube fittings.

PACKAGING

Duolok tube fittings are individually bagged to assure the highest levels of quality, safety and cleanliness. The protective bags eliminate contamination (tubing burrs, dirt, etc.) from entering the fitting prior to its use, and help to retain the integrity of the factory assembled body, nut, and ferrules.

As long as a **Duolok** tube fitting is in its original protective bag, it is identified as factory new, completely assembled and ready for installation.

Additionally, for efficient product identification and storage, the **Duolok** tube fittings are packaged in boxes that are color-coded to the tube fittings' material of construction and have pictorial labels which include the part number, product description and box quantity.

Duolok Tube Fittings

MATERIALS

316 STAINLESS STEEL

Duolok straight configuration tube fittings are machined from type 316 stainless steel cold-finished bar stock in accordance with ASTM A-276 and ASTM A-479. Shaped bodies are machined from close-grained 316 stainless steel forgings in accordance with ASTM A-182. All 316 stainless steel **Duolok** components are heat code traceable with certified material test reports (CMTRs) available.

BRASS

Duolok straight configuration tube fittings are machined from CA360 and CA345 premium brass bar stock in accordance with ASTM B-16 and ASTM B-453. Shaped bodies are machined from precision forgings of CA-377 brass in accordance with ASTM B-124.

PRESSURE RATINGS

Generally, **Duolok** tube fittings are rated for pressures equal to the maximum allowable working pressures of the tubing recommended for use with the fittings. However, it is important to note that many specially designed fittings, bored-through fittings and fittings having AN, O-Seal and SAE/MS integral ends may have lower pressure ratings than that of the tubing. (See SSP's *Selection Guide for Instrumentation Fittings and Tubing* on pages 50-53 or contact your local Authorized Distributor for more information regarding tubing and fitting pressure ratings.)

TEMPERATURE FACTORS

Duolok tube fittings function reliably in applications ranging from cryogenic temperatures to high temperature bake out with the tube fitting material as the limiting factor. It is important to note that elevated temperatures will reduce the maximum working pressure capability of the tubing system. (For more information regarding the effects of temperature on tubing pressure ratings, refer to Table 5 regarding temperature stress factors in SSP's *Selection Guide for Instrumentation Fittings and Tubing* on pages 50-53).

GAGEABILITY

Duolok tube fittings are designed, manufactured and quality controlled to be *gageable* for sufficient pull-up during initial installation. See page 10 for additional information.

INTERCHANGEABILITY

Duolok tube fittings are designed, manufactured and quality controlled to be totally "interchangeable" with the Swagelok® brand of tube fittings. Component by component examination plainly shows the two brands as completely "component-intermixable." The precision manufacturing of both products to stringent tolerances under rigid quality control procedures ensures the safety, performance and reliability of service whenever **Duolok** and Swagelok component parts are mixed and used in accordance with published installation and service recommendations.

LIFETIME WARRANTY

Duolok tube fittings are covered by a published Lifetime Warranty as printed on page 54.

TUBE SELECTION

Careful selection and specification of tubing is essential to the performance of a tubing system. When choosing the appropriate tubing material, size and wall thickness, consideration must be given to the system's environment, pressures, temperatures and flows. (For more information on tube selection, please refer to SSP's *Selection Guide for Instrumentation Fittings and Tubing* on pages 50-53.)

Duolok

Swagelok

Duolok Installation Instructions

INITIAL INSTALLATION

1. **Duolok** tube fittings come individually bagged and completely assembled for immediate use. There is no need for disassembly prior to use. Simply remove the tube fitting from its bag, insert the tube* until it bottoms in the **Duolok** tube fitting body and then hand tighten the **Duolok** nut. (See Figure #1.)

**Tubing ends should be cut as straight as possible with all O.D. and I.D. burrs removed. Use of a tubing cutter or guide blocks with a hacksaw is recommended.*

Figure #1

Note: For extreme system applications using high pressures or requiring an extra factor of safety, it may be desirable to use a "common makeup starting point" to alleviate the inherent variations in tubing diameters. Installation should begin from a "snug" position, which is achieved by wrench tightening the Duolok nut until the inserted tubing will not move freely by hand (approximately 1/8 turn). From this new "snug" starting point, continue with the recommended installation instructions.

2. While holding the fitting body stable with a back-up wrench, scribe the nut for a reference point and wrench tighten the nut 1-1/4 turns for sizes 1/4" - 1" and 3/4 turn for sizes 1/16"-3/16". (See Figures #2 and #3.)

Figure #2

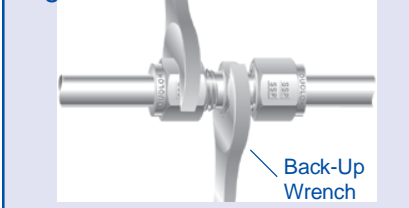

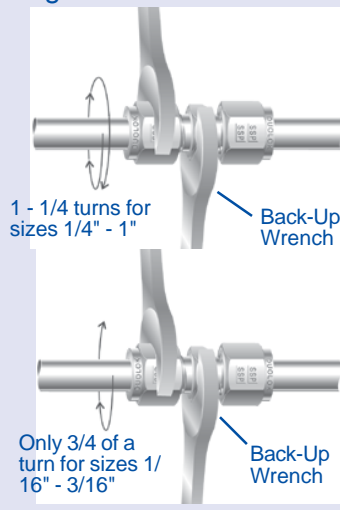

Figure #3

Note: For all sizes, tighten plugs (P), machined ferrule end of port connector (PC) and the **Duolok** end of the Female AN adapter (ANF) only 1/4 of a turn. Tube fittings in sizes over 1" require the use of the SSP Instrumentation Hydraulic Swaging Tool for installation. Contact your Authorized SSP Instrumentation Distributor for more information.

REASSEMBLY INSTRUCTIONS

1. To reassemble a **Duolok** tube fitting connection, simply insert the tubing with the previously swaged ferrules and **Duolok** nut into the fitting body until the front ferrule seats within the fitting body, and then tighten the nut by hand. (See Figure #4.)

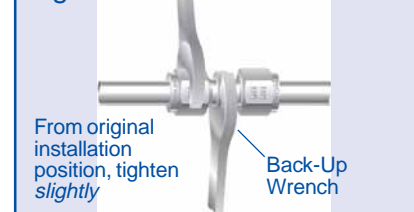

Figure #4

Note: By following proper reassembly procedures, **Duolok** tube fitting connections may be disconnected and reconnected repeatedly.

2. While holding the fitting body stable with a back-up wrench, use a wrench to rotate the **Duolok** nut to the fitting's original installation position (approximately 1/4 turn from the hand-tight, snug position) then continue to tighten the **Duolok** nut slightly. (See Figure #5.)

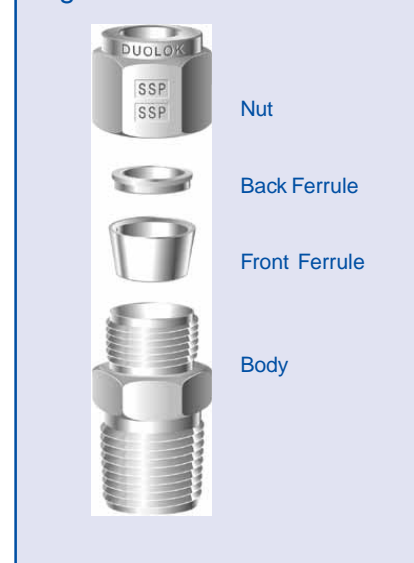

Figure #5

COMPONENT ASSEMBLY

Should individual component assembly of a **Duolok** tube fitting ever be required, careful attention must be given to the proper sequence and direction of the **Duolok** components. (See Figure #6.)

Figure #6

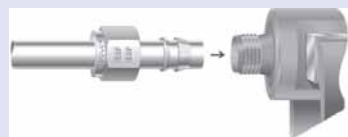

Pre-setting Tool/Gap Gage

The **Duolok** pre-setting tool is used to pre-set the ferrules on the tubing for subsequent installation in a fitting body. The pre-setting tool can be especially helpful when an installation must be made in a tight space or hard-to-work area. The presetting tool allows the major portion of the installation work to occur in a more favorable work setting with only the completion of the installation in the hard-to-work area.

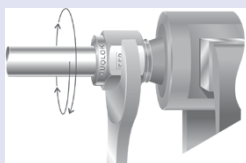

PRE-SETTING INSTRUCTIONS

1. Secure the pre-setting tool in a vise.
2. Remove the protective nut, and assemble the **Duolok** nut and ferrules loosely to the pre-setting tool. Insert the tubing through the nut and ferrules until it bottoms in the pre-setting tool, and then follow the standard **Duolok** tube fitting installation instructions from page 9. (See Figure #7A and #7B)

Figure #7A

#7B

3. Loosen the nut and remove the tubing with the pre-set **Duolok** ferrules and nut from the pre-setting tool. (See Figure #8.) Return the protective nut to the presetting tool.

Figure #8

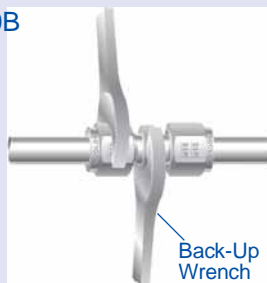

4. Installation of the tubing, with the pre-set **Duolok** ferrules and nut in the appropriate fitting body, can now be made by following the standard reassembly instructions from page 9. (See Figure #9A and #9B.)

Figure #9A

#9B

Note: To extend the life of a pre-setting tool, lubricate the tool with a lubricant compatible with the system's tubing material, environment and media. Also, at times an oversized or very soft tubing may tend to stick in the presetting tool after make up. To remove the tubing, gently rock the tube back and forth. Never turn the tube with pliers or another tool as such action may damage the sealing surfaces.

GAGEABILITY

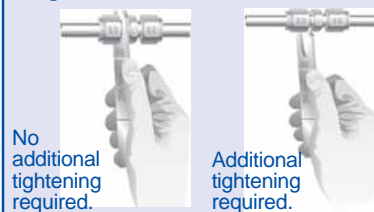

Each **Duolok** tube fitting component is manufactured with utmost precision to provide the optimum performance interaction of the components during assembly. By maintaining such stringent manufacturing tolerances, **Duolok** tube fittings are considered *gageable* for sufficient pull-up during initial installation. The **Duolok** "Gap Gages" are designed to identify for the installer or inspector, prior to pressurizing a system, that sufficient tightening of the tube fitting has occurred. *Gageability* provides additional reliability for proper installation and ultimate tube fitting safety and performance.

DUOLOK GAP GAGE INSTRUCTIONS

1. Follow proper installation instructions (as supplied with the fittings, or published in the **Duolok** catalog).
2. After completion of the installation instructions and prior to pressuring the system, choose the proper size Gap Gage and try to insert it between the fitting's nut and body hex. (See Figure #10.)
3. If the Gap Gage will not enter between the fitting's nut and body hex, no additional tightening is required.
4. If the Gap Gage will enter between the fitting's nut and body hex, additional tightening is required.

Note: Swagelok Gap Inspection Gages may also be utilized effectively with Duolok tube fittings.

Figure #10

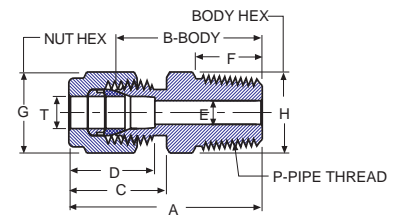

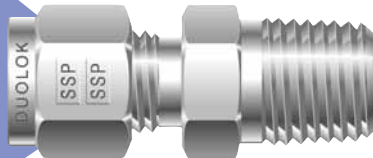

ORDERING INFORMATION

To order Duolok presetting tools and gap gages, contact your authorized SSP Instrumentation distributor.

NOTE: RS threaded fittings conform to ISO (International Standards Organization) standards 228/1. The standard gasket for RS fittings is a composite gasket. This gasket features a 300 series stainless steel outer ring with a Buna inner ring bonded to it.

Duolok tube fittings are designed and manufactured to provide safe, reliable leak free tubing connections.

Thermocouple Connector

To accommodate thermocouples and other sensing probes, the MCBT series of fittings has been “bored through” to allow the thermocouple or sensor to extend beyond the end of the fitting’s NPT thread.

Note: Pressure Ratings of “bored through” tube fittings are reduced.

For additional information on a specific fitting’s rating, contact the local distributor.

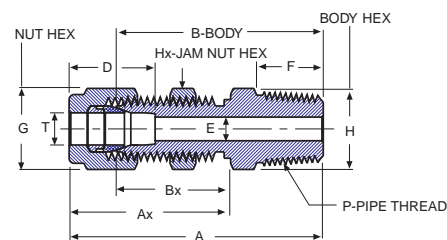

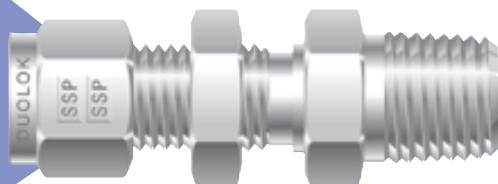

Finger-tight assembly dimensions (shown in inches) are for reference only and subject to change.

When ordering, specify material designator with part number (see page 3 for complete ordering information).

Heat Exchanger Tee

Custom configuration, forged heat exchanger tees can be designed and manufactured by SSP to customers' specific design criteria. Additionally, heat exchanger tees may be assembled by utilizing standard union tees (UT) combined with reducers that have been "bored through" (RBT fittings) to allow the process tube to be inserted into and through the jacketing tube.

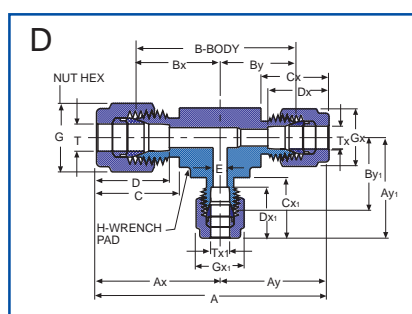

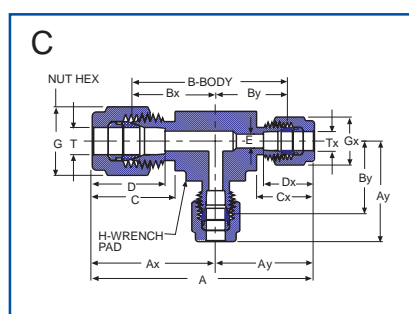

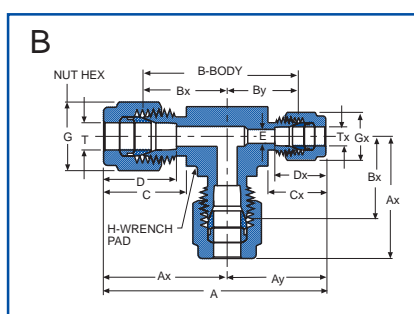

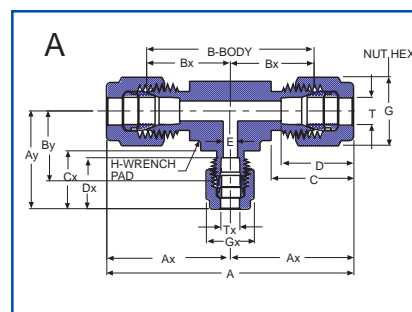

Assembled Heat Exchanger Tee

Note: Pressure ratings of "bored through" fittings are reduced.
For additional information on a specific fitting's rating, contact your local distributor.

Tube to Tube Union

Dielectric Adapter

The SSP Instrumentation Dielectric Adapter is supplied with pre-swaged 3/8" nut and ferrules. The dielectric connection has a captive 1/2" nut. Dielectric Stop Collar and assembly instructions are also supplied with the adapter. By using 3/8" and 1/2" tube-ended SSP Instrumentation tube fittings with the adapter, a wide range of dielectric fitting configurations can be built.

D8DA6	3/8	1/2	2.08	0.30	11/16	7/8

Dielectric Union

Dielectric fittings are designed to isolate monitoring and control instruments and equipment from electrical current and voltages. Manufactured in 316 stainless steel with thermoplastic insulators, SSP Instrumentation's dielectric fittings provide high dielectric strength in applications up to 5,000 PSIG. Typical applications for dielectric fittings are on impulse lines in natural gas pipeline monitoring stations. For additional factory assembled configurations, contact your local distributor.

Duolok Part #	L (inches)
D4DU	4.08
D6DU	4.20
D8DU	4.79
D6DMC4	3.80

Materials and Technical Data

Body: 316 Stainless Steel

Insulator: Polyamide-imide

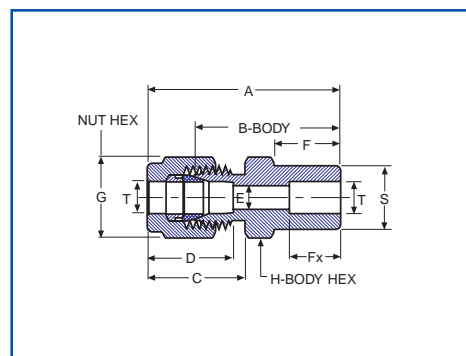

Pressure Rating: 5,000 PSIG

Temperature Rating: From -40°F to +200°F

Electrical Resistance: 1.0 x 10E7 Ohm at 70°F (20°C) at 10 VDC @ 50% relative humidity; voltage breakdown resistance of 3,000 VDC.

Duolok tube fittings with weld ends allow weld system connection to tubing with the advantage of a leak tight seal that can be disassembled in an otherwise permanently welded system. Weld ends conform to ANSI B31.1 and B31.3 piping codes. **Welding precautions:** Prior to welding, remove the nut and ferrules. To protect the fitting body threads and seat, cover with a plug or another nut. Position a suitable heat sink to dissipate the heat. Insert the tube until bottomed in the socket, then back out approximately 1/16" before welding.

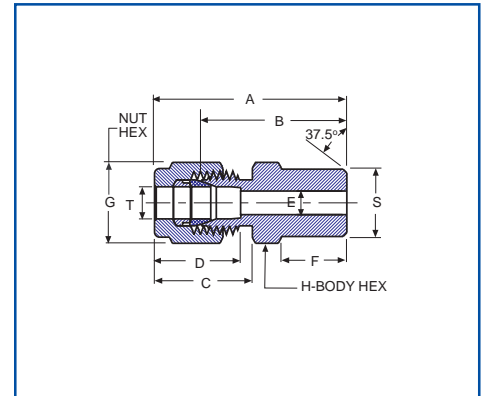

Note: The welding of a bottomed tube may lead to stress-cracking of the weld. To hold the fitting in proper alignment, tack weld the fitting in four places (90° apart) and then complete the weld. After welding, remove the protective plug or nut and replace with the nut and ferrules for tube installation following the instructions from page 9.

Finger-tight assembly dimensions (shown in inches) are for reference only and subject to change.

When ordering, specify material designator with part number (see page 3 for complete ordering information).

Port connectors are used to close connect two Duolok tube fitting ports.

Installation Instructions for Port Connectors

1A. Remove the Duolok nut and ferrules from the first of the Duolok tube fitting parts to be close connected.

1B. Slide the Duolok nut (no ferrules) over the machined ferrule end of the port connector.

1C. Insert the machined ferrule end of the port connector into the Duolok tube fitting port and hand tighten the Duolok nut.

1D. While holding the tube fitting body steady with a back up wrench, tighten the Duolok nut with a wrench 1/4 turn.

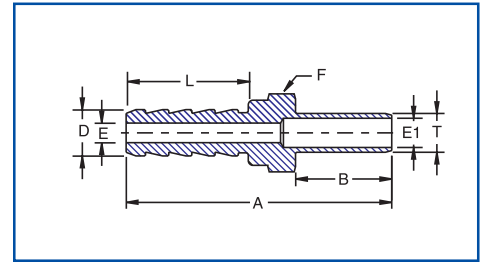

2. Insert opposite end of the port connector into the second tube fitting port, hand tighten the Duolok nut, and while holding the tube fitting body steady with a back up wrench; wrench tighten the Duolok nut 1-1/4 turns for sizes 1/4" - 1" and 3/4 turn for sizes 1/16" - 3/16".

Finger-tight assembly dimensions (shown in inches) are for reference only and subject to change.

When ordering, specify material designator with part number (see page 3 for complete ordering information).

SSP Instrumentation Calibration Unions streamline the typical DP transmitter calibration process and are available in 1/4" OD tubing by 1/4-28 straight thread, and 1/4" OD tubing by 5/16-24 straight thread. Calibration unions screw directly into plug/bleed port fittings, eliminating the possibility of galling the transmitter's NPT threads. Standard fitting material is 316 stainless steel. For more information, contact your local distributor.

Finger-tight assembly dimensions (shown in inches) are for reference only and subject to change.

When ordering, specify material designator with part number (see page 3 for complete ordering information).

Tube to O-Ring Seal

O-Ring Seal Connectors

Duolok O-Ring Seal Connectors provide a leak-tight seal in vacuum or pressure systems having tapered pipe or straight thread ports and a smooth, flat seat surface perpendicular to the axis of the threads. (See Figures 1-3.) To produce an effective seal, the connectors are manufactured with a precision groove that retains the O-Ring and prevents its extrusion from the sealing area. The connectors are designed to seal upon a raised, flat surface or with a counter bored or recessed hole. The following O-Ring Seal installation instructions and mounting dimensions chart should be helpful when working with O-Ring Seal Connectors.

O-Ring Seal Connector Installation Instructions

1. Lubricate the O-Ring with a lubricant that is compatible with the O-Ring material and the system's media and environment. (Standard O-Ring material is BUNA compound, 70 Durometer. Viton and other O-Ring compounds are available.)
2. Hand tighten the connector until the O-Ring begins to compress.
3. With a wrench, slightly snug the connector to compress the O-Ring to the port and achieve the seal.
4. When connecting or disconnecting tubing to the Duolok fitting end of the connector, always use a back-up wrench to retain the connector's installed position.

D16P	1	1-1/2
D20P	1-1/4	1-7/8
D24P	1-1/2	2-1/4

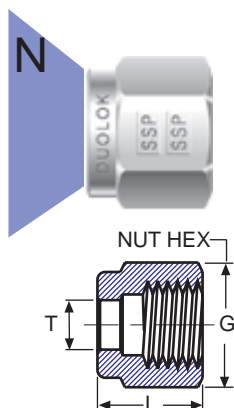

Plug Installation Instructions

1. Remove the nut and ferrules from the port of the tube fitting body to be plugged and replace with the Duolok plug.
2. Hand-tighten the Duolok plug and then while holding the tube fitting body steady with a back-up wrench, use a wrench to tighten the Duolok plug only 1/4 of a turn.

A Ferrule Set (FS) consists of one front ferrule and one back ferrule and is conveniently packaged and sold in multiples of ten sets per "holding tube" housing. To order twenty (20) sets of the 1/4" 316 Stainless Steel front and back ferrules, specify:
20 pcs. ISSD4FS

Finger-tight assembly dimensions (shown in inches) are for reference only and subject to change.

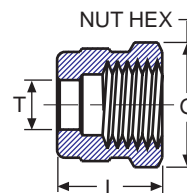

When ordering, specify material designator with part number (see page 3 for complete ordering information).

Components

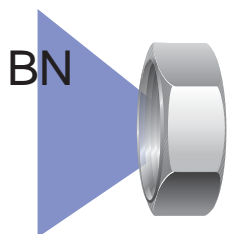

Knurled Nut

Duolok Part #	T Tube O.D.	G	L
D1KN	1/16	5/16	0.31
D2KN	1/8	7/16	0.47
D3KN	3/16	1/2	0.47
D4KN	1/4	9/16	0.50

Soft, pliable tubing

Tube Insert

Duolok Tube Fitting

In general, Duolok tube fittings may be used with a variety of plastic tube materials without any special preparations. However, very soft-wall, pliable tubing such as Tygon® needs a tube insert for support prior to insertion in the Duolok tube fitting. The standard Duolok tube fitting installation instructions (see page 9) are then followed for proper make-up.

Selection Guide for Instrumentation Fittings & Tubing

SSP flareless instrumentation quality tube fittings have been designed and manufactured to provide reliable leak free connections in a wide variety of applications. The design characteristics of the tube fittings compensate for many of the field variables involved in the installation of the tube fittings and with the tolerances, wall thickness, finish and quality of the tubing. A reliable leak free tubing system will be achieved by combining the proper selection and handling of tubing with the proper tube fitting selection and installation. The following information is provided to assist in the tube selection process.

MATERIAL

The tubing material chosen must be compatible with the system's contained media, pressure and temperature, as well as with the environment in which it will be installed. Also, the tubing and tube fitting materials should be similar for optimum sealing action to occur (stainless fittings for stainless tube, brass fittings for copper tube, carbon steel fittings for carbon steel tube, etc.). The mixing and contact of dissimilar materials may leave the system susceptible to galvanic corrosion and/or not allow proper tube fitting makeup to be achieved. Additionally, the tube fittings have been designed and manufactured to function within the hardness ranges allowed for similar tubing materials by applicable ASTM specifications as referred to in Tables 1-4.

PRESSURE AND FLOW

The size of the tube's outside diameter (O.D.) and the necessary wall thickness are determined by the system's pressure and flow requirements. Tables 1-4 detail the suggested tubing sizes and wall thicknesses for use with instrumentation tube fittings. Additionally, the tables provide the maximum allowable working pressures for each size of tube recommended for use with instrumentation tube fittings. If no pressure is shown on the table for a particular size, the tube is not recommended for use with instrumentation tube fittings. The tubing system should not be utilized above the tube's maximum allowable working pressure; however, instrumentation tube fittings have been tested as leak tight to the burst pressure of the tubing in all recommended sizes and wall thicknesses.

TEMPERATURE

The system's operating temperature may affect the initial choice of tubing material and may also affect the maximum allowable working pressure for the given tube size (see Table 5 for temperature stress factors).

LIGHT GAS SERVICE

Light gases such as hydrogen, helium, nitrogen, etc. have extremely small molecules which can be released through the smallest of leak paths including tubing surface imperfections or defects. To provide a successful connection for light gas service, the tubing must have a thick enough wall to provide resistance for the setup action of the ferrules to further compensate for the tube's potential surface condition. Tables 1-4 show the tubing sizes and wall thicknesses recommended for light gas service.

HANDLING AND INSTALLATION

Surface scratches and gouges on tubing are a source of potential leaks. Some precaution when handling the tubing can help reduce surface scratches and maintain the surface finish as originally intended by the manufacturer. Tubing should never be dragged across rocks, blacktop, pavement, or the tubing storage rack as scratches and gouges can occur. Sharp blades should always be used in the tube cutters or hacksaws used to cut the tubing so as to provide a clean, square cut. Dull cutting blades can cause internal and external hanging burrs, and cause the tubing to become oval and affect proper insertion within the fitting. As a good handling practice, tubing should always be deburred prior to tube fitting installation to help assure easy and complete tube insertion. Additionally, for bent tube assemblies, it is important to bend tubing prior to installing tube fittings, and to provide a sufficient straight length of tubing after the bend to allow the tube to be fully inserted into the fitting. See Figure A and Table 7 on page 53 for additional information. Also, to eliminate weight stress from the tubing upon the fitting and to provide additional system support for vibration and thermal shock resistance, the tubing should always be supported by tube hangers, clamps or trays.

Selection Guide for Instrumentation Fittings & Tubing

STAINLESS STEEL TUBING - TABLE 1																
Maximum Allowable Working Pressure (PSIG)																
Tube O.D. (Size (in.))	Wall Thickness of Tube (Inches)															
	.010	.012	.014	.016	.020	.028	.035	.049	.065	.083	.095	.109	.120	.134	.156	.188
1/16	5600	6850	8150	9500	12100											
1/8						8550	11000						Note: For light gas service, use tubing with wall thickness outside of screened area.			
3/16						5450	7000	10300								
1/4						4000	5100	7500	10300							
5/16							4050	5850	8050							
3/8							3300	4800	6550							
1/2							2450	3500	4750	6250						
5/8								2950	4000	5200	6050					
3/4								2400	3300	4250	4950	5800				
7/8								2050	2800	3600	4200	4850				
1									2400	3150	3650	4200	4700			
1-1/4										2450	2850	3300	3650	4150	4900	
1-1/2											2350	2700	3000	3400	4000	4900
2												2000	2200	2500	2900	3600

Calculation Basis: Annealed, seamless 304 or 316 stainless steel tubing ASTM A-269 or equivalent. System temperatures between -20°F and 100°F with allowable stress of 20,000 psi. Ultimate tensile strength of 75,000 psi. Safety factor of 4.

Reference: ANSI B 31.3 Code. (For more specific working pressure information regarding a particular tubing, consult with the actual manufacturer of the tubing.)

Note: For welded and drawn tubing, a derating factor must be utilized. For double welded tube, multiply the above pressure rating by .85; and for single welded tube by .80 (ANSI B 31, Table A-1B).

Suggested Tube Ordering Information: Specify the outside diameter and wall thickness of annealed, seamless or welded and drawn 316 or 304 stainless steel tubing of ASTM A-269, A-249, A-213 or equivalent. Also specify high quality tubing to be free of scratches, and suited for bending with material hardness not to exceed Rb 90.

COPPER TUBING - TABLE 2								
Maximum Allowable Working Pressure (PSIG)								
Tube O.D. Size (in.)	Wall Thickness of Tube (Inches)							
	.028	.035	.049	.065	.083	.095	.109	.120
1/8	2700	3600						
3/16	1700	2225	3450		Note: For light gas service, use tubing with wall thickness outside of screened area.			
1/4	1250	1600	2475	3475				
5/16		1250	1900	2675				
3/8		1050	1550	2150				
1/2		750	1150	1550	2050			
5/8			900	1200	1600	1850		
3/4			700	1000	1275	1500	1775	
7/8			600	850	1075	1250	1500	
1			550	700	950	1100	1300	1400

Calculation Basis: Annealed (Temper 060), seamless copper tubing ASTM B-75 or equivalent. System temperatures between -20°F and 100°F with allowable stress of 6000 psi. Ultimate tensile strength of 30,000 psi. Safety factor of 5.

Reference: ANSI B 31.3 Code. (For more specific working pressure information regarding a particular tubing, consult with the actual manufacturer of the tubing.)

Suggested Tube Ordering Information: Specify the outside diameter and wall thickness of annealed (Temper 060), seamless copper tubing of ASTM B-75, B-68, or equivalent specification. Also specify high quality tubing to be free of scratches, and suited for bending.

Additionally Acceptable: Annealed (Temper O) copper water tubing, Type K or Type L (ASTM B-88). No embossed markings allowed.

INSTALLING TUBE FITTINGS NEAR TUBE BENDS

When installing fittings near tube bends, it is important to **bend tubing prior to installing tube fittings** and there must be a sufficient straight length (SL) of tubing to allow the tube to be bottomed in the fitting. Note Table 7 for details.

TABLE 7

T = Tube O.D. (in.)	1/16	1/8	3/16	1/4	5/16	3/8	1/2	5/8	3/4	7/8	1	1-1/4	1-1/2	2

R	Radius of tube bend as recommended by bender manufacturer													

* Consult the factory on an application by application basis for variance.

IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE PERSONAL INJURY AND PROPERTY DAMAGE.

It is the sole responsibility of the system designers and users to properly select and use products for their specific applications. This document has been printed for users with technical expertise as a reference for further investigation to determine specific product needs relative to design requirements.

Safety Information / Warranty

Safety

To help ensure the safe and reliable performance of tube fitting products, complete system design must be considered prior to the installation of the tubing and tube fittings. Determining the design compatibility of materials, media, flows, temperatures and pressures; as well as implementing proper installation, operation and maintenance of the system are the responsibilities of the systems' owners, designers and users.

SSP Safety Reminders

All SSP products are designed and manufactured with safety in mind. The following is a limited list of general safety tips as reminders of good safety practices:

- Do not install, tighten or loosen a tube fitting while the system is under pressure.
- Do not loosen a tube fitting, nut or plug to relieve or bleed system pressure.
- Always use a back-up wrench to hold the tube fitting body steady when tightening or loosening tube fitting nuts.
- There is no need to disassemble a new tube fitting prior to use.
- Use proper thread lubricants and sealants on tapered pipe threads.
- Very soft, pliable plastic tubing requires a tube insert.
- Tube fitting and tubing material should be similar (stainless steel fittings on stainless steel tubing, brass fittings on copper tubing, etc.) with the tubing material being fully annealed. For more specific information, refer to the Selection Guide for Instrumentation Fittings and Tubing on pages 50 - 53.
- Do not weld tube fittings that are assembled. Prior to welding, remove the nut and ferrules and protect the seat and thread area of the tube fitting by covering with a plug or another nut. (See page 30 for more information.)

Duolok® Tube Fittings

LIFETIME LIMITED WARRANTY

SSP guarantees all Duolok tube fittings and Duolok tube fitting components to be free from defects in materials and workmanship. Additionally, SSP guarantees Duolok product performance to the published catalog specifications when properly installed according to the catalog selection and installation instructions. To initiate a warranty claim, suspected defective product must be returned to SSP with the nature of potential defect documented for factory evaluation. Any product with a determined defect in material or workmanship will be replaced with equivalent product at no charge.

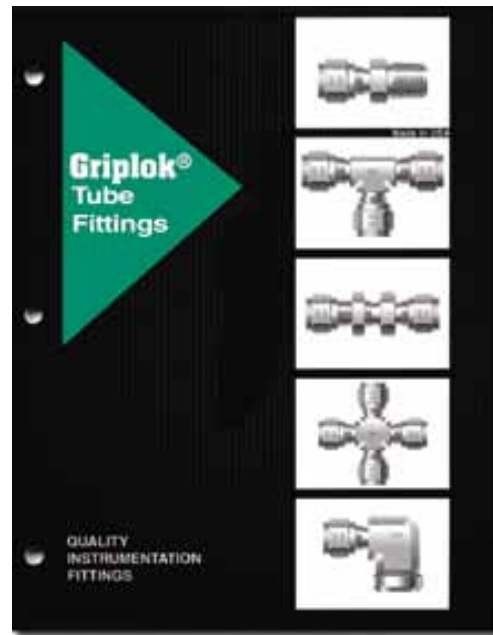

This warranty comprises the sole and entire warranty pertaining to items provided hereunder. There is no other warranty, guarantee, express or implied representation of any kind whatsoever. All other warranties including, but not limited to, merchantability and fitness for purpose, whether express, implied, or arising by operation of law, course of dealing, or trade usage are hereby disclaimed. There are no warranties which extend beyond the description on the face hereof; and this warranty does not apply in cases of abuse, mishandling, or normal use depreciation. In no event, whether alleged to arise from breach of contract, express or implied warranty, by operation of law, negligence or otherwise, will SSP be liable for any incidental, consequential, lost property, or other special damages of any kind whatsoever. The exclusive, only remedy under this warranty is the replacement of determined defective parts as set forth above.

Also from SSP Instrumentation

In addition to Duolok Tube Fittings, SSP Instrumentation also offers Unilok and Griplik Instrumentation Tube Fittings; TruFit Pipe, Weld, Hose and Adapter Fittings; and FloLok Valves. Contact your SSP Instrumentation Distributor for more information.

Metric Tube Fittings

Tube Fittings 3-25mm

Company Information

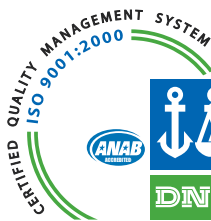

1926 SSP Fittings Corp. is founded in Cleveland, Ohio, U.S.A. SSP begins as a contract manufacturer of screw machine products in brass and carbon steel to general industry.

1940s World War II shifts the company's focus to production of fittings for tubing, pipe, and hose. Following the war, SSP's customers are able to satisfy their own requirements without relying on outside companies for production. SSP contracts.

1970s New Focus. By the early 1970s, SSP embarks on a market & manufacturing driven strategy of producing quality fittings from difficult-to-machine alloys. The performance requirements of customers utilizing these materials in industries as diverse as marine, defense, offshore oil, and aerospace, drive SSP to establish both conformance quality standards, and service levels, which are significantly ahead of general industry at the time.

1980s The "Works". Things are really happening for SSP. The company establishes a product line and distribution channel for hydraulic fittings, which require significant investments in a new, state-of-the-art facility south of Cleveland. SSP builds a 165,000 sq. ft. facility to house our vertically-integrated "Works," including, by now, tool & die design & production, custom closed-die forging, machining, finishing operations, assembly and test. With over 200 work centers, SSP's Twinsburg "Works" is among the largest single-site facilities in the entire industry.

1990s Market Expansion. SSP's distribution network for high performance hydraulic fittings expands into some select global markets and new standards are required of US-based distributors to meet the growing competitive challenge. Investments in design engineering usher in the introduction of SSP Instrumentation and brands Duolok, Unilok, Griplok & TruFit instrumentation-quality tube & pipe fittings for process, research & power generation markets. Finally, as has now come to be expected, SSP is one of the first companies in our market to earn ISO 9001 certification.

2000 The New Force. SSP acquires Flolok Valve and enters the instrumentation valve marketplace. Significant investments in information technology & modern production equipment prepare the company to leverage its reputation for product availability & speed.

2004 Lean. SSP makes commitment to ourselves and our customers to launch a sustained implementation of Lean-Sigma as our primary operations strategy. Lean manufacturing - a business planning and execution system based on the Toyota Production System - is an excellent framework for extending SSP's historic advantage in speed and product availability.

2007 Continued Growth. Utilizing Kaizen methodology and Six Sigma tools, new products and capabilities are introduced at rapid rate. All manufacturing continues to be performed by SSP to keep replenishment times as quick as our growing customer base requires.

2008 100th Kaizen event completed. Factory floor transformation includes organization into Value Streams, widespread use of visual, real-time controls, emphasis on set-up reduction and 5S; utilizing Kanban pull based scheduling of A & B inventory items, and Design-for-Lean Sigma methodologies.

How to Order Duolok Tube Fittings

Duolok brand tube fittings for metric tubing are ordered by specifying part numbers as listed in this catalog. The following explains the part numbering system:

Example: ISSDM4MC2

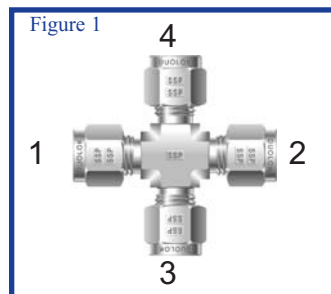

NOTES:

All Configurations: Only one size indicator is necessary when all of the connections are the same type and size.

Straights and Elbows: Specify the tube end first followed by the smaller tube end or differing type of connection (MNPT, FNPT, etc.)

Tees and Crosses: Tees are described by first sizing the run (1 to 2) and then the branch (3). Crosses are described by first sizing the run (1 to 2) and then the branch (3 to 4). See figure 1.

Specials: SSP manufactures a wide variety of special application tube fittings. Contact your local distributor for details regarding availability of special tube fitting configurations, materials and sizes.

CHART #1

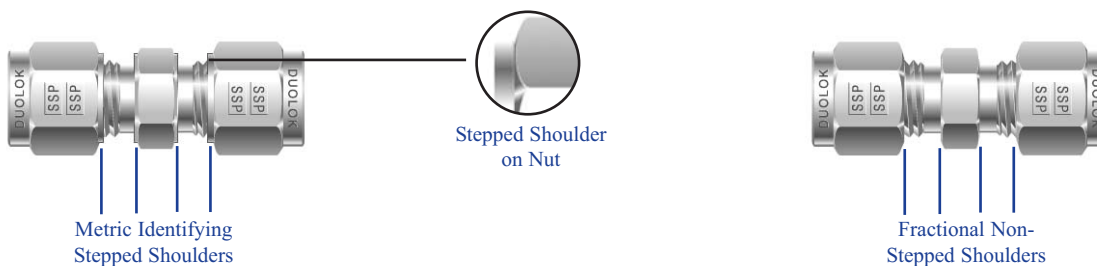

Materials Designator	Material
ISS	316 Stainless Steel

CHART #2

Type of Fitting Designator	Description of Griplok Tube Fitting Types
BU	Bulkhead Union
CP	Cap
FA	Female Adapter
FBT	Female Branch Tee
FC	Female Connector

FF	Front Ferrule
FS	Ferrule Set
N	Nut
TI	Tube Insert

Identifying Metric Duolok Fittings

Duolok metric tube fittings have a stepped shoulder on the body hex and the nut, shaped fittings have a stepped shoulder on the nut.

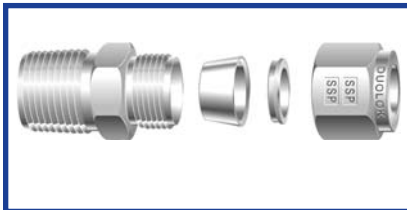

Duolok Tube Fittings

DESIGN

Duolok tube fittings are designed and manufactured to provide a reliable, leak-proof connection in instrument and process tubing systems. **Duolok** tube fittings consist of four precision-machined components:

- 1) Body
- 2) Front Ferrule
- 3) Back Ferrule
- 4) Nut

During make-up, the controlled drive action of the ferrules compensates for variations in tubing materials, hardness, and thickness of the tube wall to provide leak-tight connections in an extensive range of applications.

Additionally, in fulfillment of the design criteria, all **Duolok** components are manufactured with stringent tolerances and superior surface finishes to rigorous quality control standards to assure the optimum performance of each component.

OPERATION

Through critical interaction of precision-machined fitting components with the process tube, a leak-tight seal is achieved.

The simple geometric rotation of the **Duolok** nut provides the axial thrust necessary to "coin" the ferrules into the outside diameter of the tube. To eliminate any potential stress on an existing system, the tube fittings have been designed to not transmit installation torque from the tube fittings to the tube.

During the rotary movement of the nut, the internal surface of the nut meets with the rear surface of the rear ferrule to axially move the rear ferrule forward against the back radius of the front ferrule.

Simultaneously, the front ferrule is driven forward into the angular section of the fitting body to form a primary metal-to-metal seal. The back ferrule roll-in locking action occurs on the outside diameter of the tube to complete the sealing action and secure the tube within the fitting.

The controlled ferrule drive prevents body distortion and helps compensate for exposure to system variables such as vibration, pressure pulsation and thermal expansion or contraction.

QUALITY

SSP's Quality System has been certified to conform to the **ISO 9001:2000 Quality Standard**. Achievement of this prestigious status further confirms SSP's continuing commitment to quality which is reflected throughout the company in its personnel, policies, equipment, products and service.

In addition, all **Duolok** tube fittings are manufactured to the technical design specifications and rigid quality control standards of the SSP Instrumentation Division.

Statistical Process Control techniques are employed within the manufacturing process to assure timely, meaningful feedback to the production team. Attention to detail, through continual process monitoring and control, provides the necessary manufacturing quality for the **Duolok** instrumentation tube fittings.

PACKAGING

Duolok tube fittings are individually bagged to assure the highest levels of quality, safety and cleanliness. The protective bags eliminate contamination (tubing burrs, dirt, etc.) from entering the fitting prior to its use, and help to retain the integrity of the factory assembled body, nut, and ferrules.

As long as a **Duolok** tube fitting is in its original protective bag, it is identified as "factory new," completely assembled and ready for installation.

The individually bagged **Duolok** tube fittings are packaged in convenient, small-lot quantities for easy procurement and handling. Additionally, for efficient product identification and storage, the boxes are color-coded to the tube fittings' material of construction and have pictorial labels which include the part number, product description and box quantity.

MATERIALS

316 STAINLESS STEEL

Duolok straight configuration tube fittings are machined from type 316 stainless steel cold-finished bar stock in accordance with ASTM A-276 and ASTM A-479. Shaped bodies are machined from close-grained 316 stainless steel forgings in accordance with ASTM A-182. All 316 stainless steel **Duolok** components are heat code traceable with certified material test reports (CMTRs) available.

PRESSURE RATINGS

Generally, **Duolok** tube fittings are rated for pressures equal to the maximum allowable working pressures of the tubing recommended for use with the fittings. However, it is important to note that many specially designed fittings, bored-through fittings and fittings having AN, O-Seal and SAE/MS integral ends may have lower pressure ratings than that of the tubing. (See SSP's Selection Guide for Instrumentation Fittings and Tubing on pages 32-35 or contact your local Authorized Distributor for more information regarding tubing and fitting pressure ratings.)

TEMPERATURE FACTORS

Duolok tube fittings function reliably in applications ranging from cryogenic temperatures to high temperature bake out with the tube fitting material as the limiting factor. It is important to note that elevated temperatures may affect the maximum working pressure capability of the tubing system. (For more information regarding the effects of temperature on tubing pressure ratings, consult Table 2 on page 33.)

INTERCHANGEABILITY

Duolok tube fittings are designed, manufactured, quality controlled and distributed to be totally "interchangeable" with the Swagelok® brand of tube fittings. Component by component examination plainly shows the two brands as completely "component-intermixable". The precision manufacturing of both products to stringent tolerances under rigid quality control procedures ensures the safety, performance and reliability of service whenever Swagelok and **Duolok** component parts are mixed and used in accordance with published installation and service recommendations.

LIFETIME WARRANTY

Duolok tube fittings are covered by a published lifetime warranty as printed on the inside back cover of this catalog.

TUBE SELECTION

Careful selection and specification of tubing is essential to the performance of a tubing system. When choosing the appropriate tubing material, size and wall thickness, consideration must be given to the system's environment, pressures, temperatures and flows. (For more information on tube selection, please refer to Table 1 on page 33.)

Duolok

Swagelok

Installation Instructions

INITIAL INSTALLATION

1. **Duolok** tube fittings come individually bagged and completely assembled for immediate use. There is no need for disassembly prior to use. Simply remove the tube fitting from its bag, insert the tube* until it bottoms in the **Duolok** tube fitting body and then hand tighten the **Duolok** nut. (See figure #1)

Figure #1

**Tubing ends should be cut as straight as possible with all O.D. and I.D. burrs removed. Use of a tubing cutter or guide blocks with a hacksaw is recommended.*

[NOTE: For extreme system applications using high pressures or requiring an extra factor of safety, it may be desirable to use a “common make up starting point” to alleviate the inherent variations in tubing diameters. Installation should begin from a snug position, which is achieved by wrench tightening the **Duolok** nut until the inserted tubing will not move by hand (approximately 1/8 turn). From this new “snug” starting point, continue with the recommended installation instructions.]

2. While holding the fitting body stable with a back-up wrench, scribe the nut for a reference point and wrench tighten the nut 1-1/4 turns for sizes 6mm-25mm and 3/4 turn for sizes 3mm-5mm. (See Figures #2 and #3.)

Figure #2

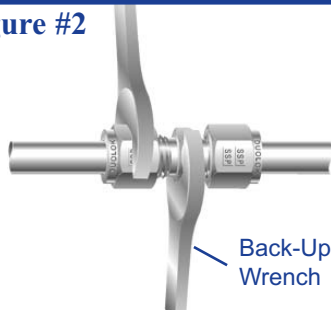

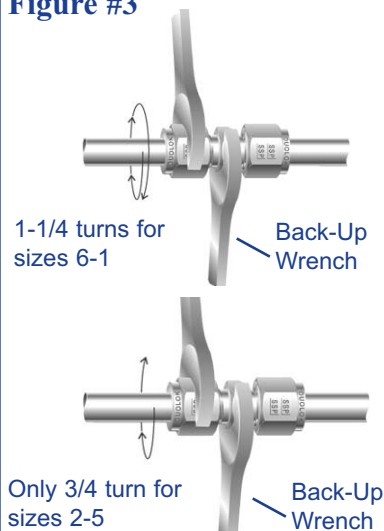

Figure #3

[NOTE: For all sizes, tighten plugs (P), machined ferrule end of port connector (PC) and the **Duolok** end of the Female AN adapter (ANF) only 1/4 of a turn. Tube fittings in sizes over 25mm require the use of the SSP Hydraulic Swaging Tool for installation. Contact your local SSP Distributor for more information]

REASSEMBLY INSTRUCTIONS

1. To reassemble a **Duolok** tube fitting connection, simply insert the tubing with the previously coined ferrules and **Duolok** nut into the fitting body until the front ferrule seats within the fitting body, and then tighten the nut by hand. (See Figure #4.)

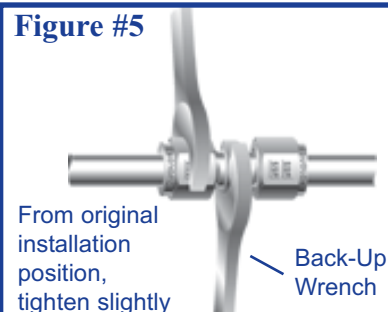

Figure #4

[NOTE: By following proper reassembly procedures, **Duolok** tube fitting connections may be disconnected and reconnected repeatedly.]

2. While holding the fitting body stable with a back up wrench, use a wrench to rotate the **Duolok** nut to the fitting's original installation position (approximately 1/4 turn from the hand-tight, snug position) then continue to tighten the **Duolok** nut slightly. (See Figure #5.)

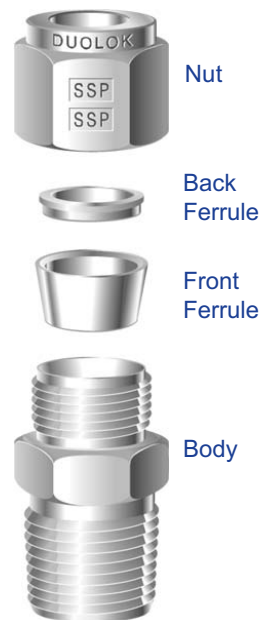

Figure #5

COMPONENT ASSEMBLY

Should individual component assembly of a **Duolok** tube fitting ever be required, careful attention must be given to the proper sequence and direction of the **Duolok** components. (See Figure #6.)

Figure #6

The **Duolok** pre-setting tool is used to pre-set the ferrules on the tubing for subsequent installation in a fitting body. The pre-setting tool can be especially helpful when an installation must be made in a tight space or hard-to-work area. The presetting tool allows the major portion of the installation work to occur in a more favorable work setting with only the completion of the installation in the hard-to-work area.

PRE-SETTING INSTRUCTIONS

1. Secure the pre-setting tool in a vise.
2. Remove the protective nut, and assemble the **Duolok** nut and ferrules loosely to the pre-setting tool. Insert the tubing through the nut and ferrules until it bottoms in the pre-setting tool, and then follow the standard **Duolok** tube fitting installation instructions from page 6. (See Figures #7A and #7B.)

Figure #7A

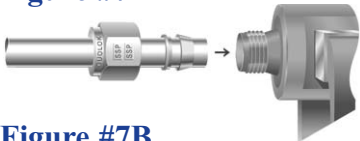

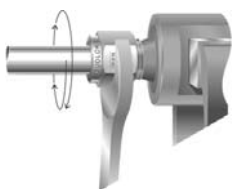

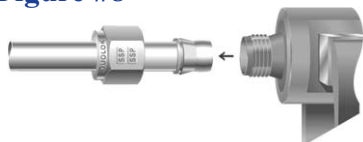

Figure #7B

3. Loosen the nut and remove the tubing with the pre-set **Duolok** ferrules and nut from the pre-setting tool. (See Figure #8.)

Figure #8

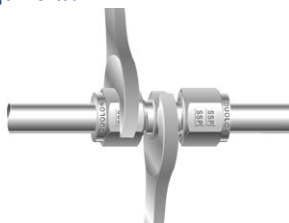

4. Installation of the tubing, with the pre-set **Duolok** ferrules and nut in the appropriate fitting body can now be made by following the standard reassembly instructions from page 6. (See Figures #9A and #9B.)

5. Return the protective nut to the presetting tool.

Figure #9A

Figure #9B

[NOTE: To extend the life of a pre-setting tool, lubricate the tool with a lubricant compatible with the system's tubing material, environment and media. Also, at times an oversized or very soft tubing may tend to stick in the presetting tool after make up. To remove the tubing, gently rock the tubing back and forth. Never turn the tube with pliers or another tool as such action may damage the sealing surfaces.]

GAGEABILITY

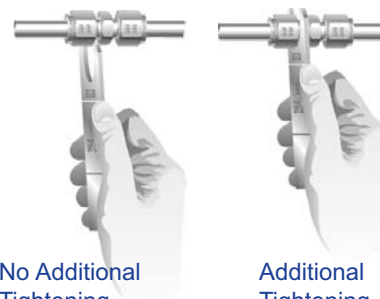

Each Duolok tube fitting component is manufactured with utmost precision to provide the optimum performance interaction of the components during assembly. By maintaining such stringent manufacturing tolerances, Duolok tube fittings are considered gageable for sufficient pull-up during initial installation. The Duolok "Gap Gages" are designed to identify for the installer or inspector, prior to pressurizing a system, that sufficient tightening of the tube fitting has occurred. Gageability provides additional reliability for proper installation and ultimate tube fitting safety and performance.

DUOLOK GAP GAGE INSTRUCTIONS

1. Follow proper installation instructions (as supplied with the fittings, or published in the **Duolok** catalog).
2. After completion of the installation instructions and prior to pressuring the system, choose the proper size Gap Gage and try to insert it between the fitting's nut and body hex. (See Figure #10).
3. If the Gap Gage will not enter between the fitting's nut and body hex, no additional tightening is required.
3. If the Gap Gage will enter between the fitting's nut and body hex, additional tightening is required.

[NOTE: Swagelok Gap Inspection Gages may also be utilized effectively with Duolok tube fittings.]

Duolok tube fittings with weld ends allow weld system connection to tubing with the advantage of a leak tight seal that can be disassembled in an otherwise permanently welded system. Weld ends conform to ANSI B31.1 and B31.3 piping codes.

Welding precautions: Prior to welding, remove the nut and ferrules. To protect the fitting body threads and seat, cover with a plug or another nut. Position a suitable heat sink to dissipate the heat. Insert the tube until bottomed out in the socket, then back out approximately 1.5mm - 2.0mm before welding.

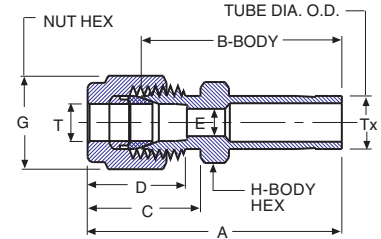

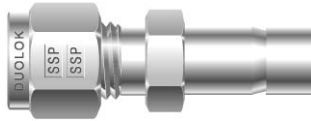

Note: The welding of a bottomed tube may lead to stress cracking of the weld. To hold the fitting in proper alignment, tack weld the fitting in four places (90° apart) and then complete the weld. After welding, remove the protective plug or nut and replace with the nut and ferrules for tube installation following the instructions from page 6.

Finger-tight assembly dimensions (shown in millimeters) are for reference only and subject to change.

Code Pressures per ASME B31.3 Refer to *Selection Guide for Instrumentation Tubing for Working Pressures*.

Port Connectors are used to close connect two Duolok tube fitting ports.

Installation Instructions for Port Connectors

- 1A. Remove the Duolok nut and ferrules from the first of the Duolok tube fitting parts to be close connected.
- 1B. Slide the Duolok nut (no ferrules) over the machined ferrule end of the port connector.
- 1C. Insert the machined ferrule end of the port connector into the Duolok tube fitting port and hand tighten the Duolok nut.
- 1D. While holding the tube fitting body steady with a backup wrench, tighten the Duolok nut with a wrench 1/4 turn.
2. Insert opposite end of the port connector into the second tube fitting port, hand tighten the Duolok nut, and while holding the tube fitting body steady with a backup wrench; wrench tighten the Duolok nut 1-1/4 turns for sizes 6-25, and 3/4 turn for sizes 3-4.

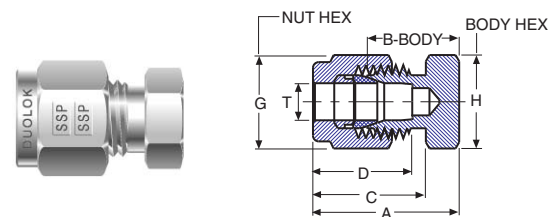

Finger-tight assembly dimensions (shown in millimeters) are for reference only and subject to change.

Code Pressures per ASME B31.3 Refer to *Selection Guide for Instrumentation Tubing for Working Pressures*.

Ferrule Set (FS)

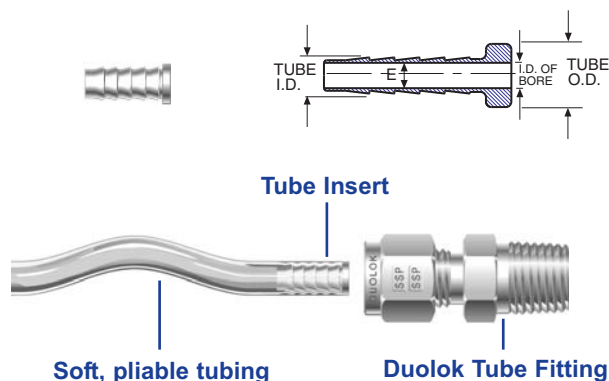

Duolok Part #	TUBE O.D.
DM6FS	6
DM8FS	8
DM10FS	10
DM12FS	12

A Ferrule Set (FS) consists of one front ferrule and one rear ferrule and is conveniently packaged and sold in multiples of ten sets per "holding tube" housing. *To order twenty (20) sets of the 1/4" 316 Stainless Steel front and back ferrules, specify: 20 pcs. ISSD4FS*

Tube Insert (TI)

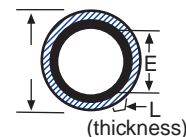

Duolok Part #	TUBE O.D.	TUBE I.D.	I.D. OF BORE
DM6TI4	6	4	2.8
DM8TI6	8	6	4.4
DM10TI8	10	8	6.4
DM12TI8	12	8	6.4
DM12TI10	12	10	8.3

In general, Duolok tube fittings may be used with a variety of plastic tube materials without any special preparations. However, very soft-wall, pliable tubing such as Tygon® needs a tube insert for support prior to insertion in the Duolok tube fitting. The standard Duolok tube fitting installation instructions (see page 6) are then followed for proper make-up.

Bonded Washer (DW)

Duolok Part #	ISO PIPE SIZE	E	A	L
4DW-BSPP	1/4	13.7	20.6	2
6DW-BSPP	3/8	17.3	23.9	2
8DW-BSPP	1/2	21.6	28.7	2.5
12DW-BSPP	3/4	26.9	35.1	2.5
16DW-BSPP	1	33.8	42.9	2.5

Comes standard as 300 series stainless steel washer with Buna inner ring. Also available with Viton® ring or as a stainless steel washer with Viton® ring. Add -V for Viton® or -SS-V for stainless steel/ Viton®

SSP instrumentation quality tube fittings have been designed and manufactured to provide leak free connections in a wide variety of applications. The design characteristics of the tube fittings compensate for many of the field variables involved in the installation of the tube fittings and with the tolerances, wall thickness, finish and quality of the tubing. A reliable leak free tubing system will be achieved by combining the proper selection and handling of tubing with the proper tube fitting selection and installation. The following information is provided to assist in the tube selection process.

MATERIAL

The tubing material chosen must be compatible with the system's contained media, pressure and temperature, as well as with the environment in which it will be installed. Also, the tubing and tube fitting materials should be similar for optimum sealing action to occur (stainless fittings for stainless tube, brass fittings for copper tube, carbon steel fittings for carbon steel tube, etc.) The mixing and contact of dissimilar materials may leave the system susceptible to galvanic corrosion and/or not allow proper tube fitting make up to be achieved. Additionally, the tube fittings have been designed and manufactured to function within the hardness ranges allowed for similar tubing material by applicable EN ISO 1127 specifications as referred to in Table 1.

PRESSURE AND FLOW

The size of the tube's outside diameter (O.D.) and the necessary wall thickness are determined by the systems pressure and flow requirements. Table 1 details the suggested tubing sizes and wall thicknesses for use with instrument tube fittings. Additionally, the tables provide the maximum allowable working pressures for each size of tube recommended for use with instrument tube fittings. If no pressure is shown on the table for a particular size, the tube is not recommended for use with instrumentation tube fittings. The tubing system should not be utilized above the tube's maximum allowable working pressure; however, instrument tube fittings have been tested as leak tight to the burst pressure of the tubing in all recommended sizes and wall thickness.

TEMPERATURE

The system's operating temperature may effect the initial choice of tubing material and may also effect the maximum allowable working pressure for the given tube size (see Table 2 for temperature stress factors).

LIGHT GAS SERVICE

Light gasses such as hydrogen, helium, nitrogen, etc. have extremely small molecules which can be released through the smallest of leak paths including tubing surface imperfections or defects. To provide a successful connection for light gas service, the tubing must have a thick enough wall to provide resistance for the setup action of the ferrules to further compensate for the tube's potential surface condition. Table 1 shows the tubing sizes and wall thicknesses recommended for light gas service.

HANDLING AND INSTALLATION

Surface scratches and gouges on tubing are a source of potential leaks. Some precaution when handling the tubing can help reduce surface scratches and maintain the surface finish as originally intended by the manufacturer. Tubing should never be dragged across rocks, blacktop, pavement or the tubing storage rack as scratches and gouges can occur. Sharp blades should always be used in the tube cutters or hacksaws used to cut the tubing as to provide a clean square cut. Dull cutting blades can cause internal and external hanging burrs, and cause the tubing to become oval and effect proper insertion within the fitting. As a good handling practice, tubing should always be deburred prior to tube fitting installation to help assure easy and complete tube insertion. Additionally, for bent tube assemblies, it is important to bend tubing prior to installing tube fittings, and to provide a sufficient straight length of tubing after the bend to allow the tube to be fully inserted into the fitting. See Table 4 for additional information. Also, to eliminate weight stress from the tubing upon the fitting and to provide additional system support for vibration and thermal shock resistance, the tubing should always be supported by tube hangers, clamps or trays.

STAINLESS STEEL TUBING - TABLE 1 Maximum Allowable Working Pressure (bar)											
Tube O.D. Size (mm)	Wall Thickness of Tube (mm)										
	0.8	1.0	1.2	1.5	1.8	2.0	2.2	2.5	2.8	3.0	3.5
3	670										
6	310	420	540	710							
8		310	390	520					Note: For light gas service, use tubing with wall thickness outside of screened area.		
10		240	300	400	510	580					
12		200	250	330	410	470					
14		160	200	270	340	380	430				
15		150	190	250	310	360	400				
16			170	230	290	330	370	400			
18			150	200	260	290	320	370			
20			140	180	230	260	290	330	380		
22			140	160	200	230	260	300	340		
25					180	200	230	260	290	320	

Calculation Basis: Annealed, seamless 304 or 316 stainless steel tubing EN ISO 1127 or equivalent (from ASME B31.3). System temperatures between -20°F and 100°F with allowable stress of 1370 bar (20,000 psi). Ultimate tensile strength of 5170 bar (75,000 psi). Safety factor of 4.

Reference: ANSI B31.3 Code. (For more specific working pressure information regarding a particular tubing, consult with the actual manufacturer of the tubing.) Multiply stainless steel rating by 0.94 for working pressure in accordance with ASME B31.1.

Note: For welded and drawn tubing, a derating factor must be utilized. For double welded tube, multiply the above pressure rating by .85; and for single welded tube .80. (ANSI B31 Table A-1B).

Suggested Tube Ordering Information: Specify the outside diameter and wall thickness of annealed, seamless or welded and drawn 316 or 304 stainless steel tubing of EN ISO 1127 or equivalent. Also specify high quality tubing to be free of scratches, and suited for bending with material hardness not to exceed Rb 90 (200 HV).

STRESS FACTORS FOR DETERMINING TUBING PRESSURE RATINGS AT ELEVATED TEMPERATURES - TABLE 2			
TEMPERATURE STRESS FACTORS			
Temperature		Stainless Steel	
°F	°C	304SS	316SS
100	38	1.00	1.00
200	93	1.00	1.00
300	149	1.00	1.00
400	204	.94	.97
500	260	.88	.90
600	316	.82	.85
700	371	.80	.82
800	427	.76*	.80*
900	482	.73*	.78*
1000	538	.69*	.73*
1200	649	.30*	.37*

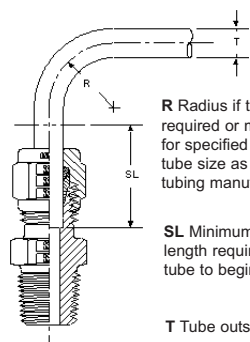

* The precipitation of chromium carbides potentially resulting in intergranular corrosion may occur when exposed to operating temperatures above 800°F / 427°C. Consult the factory for further information.

Instructions: To determine maximum allowable working pressure for tubing at elevated temperatures, multiply the applicable tube's maximum allowable working pressure from Table 1 by the corresponding temperature stress factor from Table 2.

SSP PIPE END PRESSURE RATINGS, ANSI/ASME B 31.3 - TABLE 3

NPT/ISO Pipe Size	Size	316 STAINLESS STEEL			
		Male		Female	
		psig	bar	psig	bar
1/16"	1	11,050	760	6,750	460
1/8"	2	10,050	690	6,550	450
1/4"	4	8,050	550	6,650	460
3/8"	6	7,850	540	5,350	370
1/2"	8	7,750	530	4,950	340
3/4"	12	7,350	510	4,650	320
1"	16	5,350	370	4,450	310
Reference: bar = .0695 X psig					
To obtain ANSI/ASME B 31.1 values, multiply ANSI/ASME B 31.3 values by .94.					

INSTALLING TUBE FITTINGS NEAR TUBE BENDS

R Radius of tubing bend as required or minimum allowed for specified wall thickness and tube size as recommended by tubing manufacturer.

SL Minimum straight tube length required from end of tube to beginning of bend.

T Tube outside diameter.

FIGURE A

When installing fittings near tube bends, it is important to **bend tubing prior to installing tube fittings** and there must be a sufficient straight length (SL) of tubing to allow the tube to be bottomed in the fitting. Note Table 4 for details.

TABLE 4

T = Tube O.D. (mm)	3	6	8	10	12	14	18	20	25
*SL= Minimum Straight Length of Tube (mm)	19	21	23	25	31	32	32	34	40
R	Radius of tube bend as recommended by bender manufacturer								

* Consult the factory on an application by application basis for variance.

WARNING

IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE PERSONAL INJURY AND PROPERTY DAMAGE.

It is the sole responsibility of the system designers and users to properly select and use products for their specific applications. This document has been printed for users with technical expertise as a reference for further investigation to determine specific product needs relative to design requirements.

Safety

To help ensure the safe and reliable performance of tube fitting products, complete system design must be considered prior to the installation of the tubing and tube fittings. Determining the design compatibility of materials, media, flows, temperatures and pressures; as well as implementing proper installation, operation and maintenance of the system are the responsibility of the systems' owners, designers and users.

SSP Safety Reminders

All SSP products are designed and manufactured with safety in mind. The following is a limited list of general safety practices:

Do not install, tighten or loosen a tube fitting while the system is under pressure.

Do not loosen a tube fitting, nut or plug to relieve or bleed system pressure.

Always use a back-up wrench to hold the tube fitting body steady when tightening or loosening tube fitting nuts.

There is no need to disassemble a new tube fitting prior to use.

Use proper thread lubricants and sealants on tapered pipe threads.

Very soft, pliable plastic tubing requires a tube insert.

Tube fitting and tubing material should be similar (stainless steel fittings on stainless steel tubing, brass fittings on copper tubing, etc.) with the tubing material being fully annealed. For more specific information, refer to the Selection Guide for Instrumentation Tubing on page 32-35.

Do not weld tube fittings that are assembled. Prior to welding, remove the nut and ferrules and protect the seat and thread area of the tube fitting by covering with a plug or another nut.

Duolok[®] Tube Fittings LIFETIME LIMITED WARRANTY

SSP guarantees all Duolok tube fittings and Duolok tube fitting components to be free from defects in materials and workmanship. Additionally, SSP guarantees Duolok product performance to the published catalog specifications when properly installed according to the catalog selection and installation instructions. To initiate a warranty claim, suspected defective product must be returned to SSP with the nature of potential defect documented for factory evaluation. Any product with a determined defect in material or workmanship will be replaced with an equivalent product at no charge.

This warranty comprises the sole and entire warranty pertaining to items provided hereunder. There is no other warranty, guarantee, express or implied representation of any kind whatsoever. All other warranties including, but not limited to, merchantability and fitness for purpose, whether express, implied, or arising by operation of law. Course of dealing, or trade usage are hereby disclaimed. There are no warranties which extend beyond the description on the face hereof; and this warranty does not apply in the case of abuse, mishandling, or normal use depreciation. In no event, whether alleged to arise from breach of contract, express or implied warranty, by operation of law, negligence or otherwise, will SSP be liable for any incidental, consequential, lost property, or other special damages of any kind what so ever. The exclusive only remedy under this warranty is the replacement of determined defective parts as set forth above.
