

# LIQUID FLOW METERS FOR PRECISION APPLICATIONS

S Series Microturbine Liquid FLO-METERS

## APPLICATION IDEAS

Monitoring input flow to an analyzer

Verifying flow in a coolant loop

Checking fuel consumption on a furnace or engine

Dispensing chemicals in a laboratory

### **Product Description**

McMillan S Series FLO-METERS are capable of measuring extremely low liquid flow rates from 13 millilters per minute (mL/minute) up to 10 liters per minute (L/minute) with a full scale accuracy of ±1.0% or better! A wide variety of fluids may be measured. Repeatable results are achieved using a Pelton-type microturbine wheel. This proven design has been providing precision results since 1988 and has developed a well-deserved reputation for continuous operational service or many years without failure.

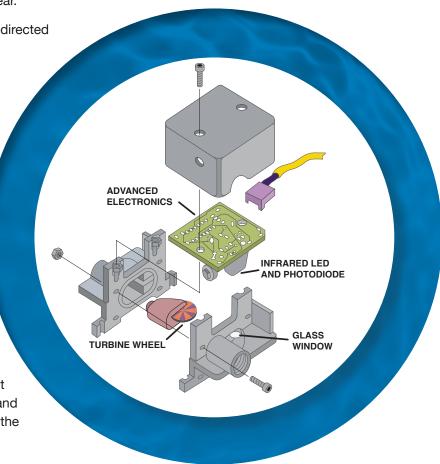

Because of the compact size and economical cost of these products, the S Series FLO-METERS are suitable for a wide variety of industrial, commercial, laboratory and O.E.M. applications. Some sample applications include measurement of hydrocarbon fluids, fuels, light oils, solvents, coolant, pesticides, acids, alkalis, and deionized water.

Several body types are available, including both plastic and metal. NIST Traceable certificates are available on all models. A backlit LCD display is integrated into each unit and is programmed to read in mL/minute (L/minute for flow ranges 7-10).

### **Principle of Operation**

McMillan's microturbine wheel technology utilizes the Pelton turbine wheel concept. This design allows for use of a miniature turbine wheel similar in size to a U.S. dime (16 mm diameter, 0.75 mm thick). The wheel is supported on a very small metal alloy shaft, held in position by two sapphire bearings. Due to the light weight of both the wheel and the shaft, the microturbine wheel virtually floats in the liquid. This flotation effect relieves force on the shaft and bearings, virtually eliminating wear.

As flow passes through the FLO-METER, it is directed onto the very small teeth of the wheel using a precision-machined nozzle. This nozzle is sized according to the flow range of the unit. The rotational speed of the turbine wheel increases proportionally to the volumetric flow rate. The microturbine wheel has alternating white and black sections evenly spaced on one surface of the wheel. As the wheel rotates, an infrared beam is reflected off each white section and is directed to a phototransistor which detects each reflected beam and converts them into pulses. As the wheel spins faster, pulse rate increases. When the wheel stops (under zero flow conditions), no pulses are generated. Consequently, zero drift is not possible and zero adjustments are never required. Processing circuitry provides an analog output that are linearly proportional to the flow rate, and the flow rate in engineering units is shown on the integrated display.

### **Features and Options**

### **FLOW RANGES**

Flow ranges from 13-100 mL/minute up to 1.0-10.0 L/minute are available. Consult the factory for custom requirements.

#### **POWER**

Most units may be specified to operate with either 12VDC or 24VDC power. Various power adapters are also available for use with 12VDC versions.

### **SIGNAL INPUTS & OUTPUTS**

An analog 0-5VDC output is provided on all units.

### ACCURACY/LINEARITY

All models have a standard accuracy specification of  $\pm 1\%$  F.S. (including linearity). An improved accuracy specification of  $\pm 0.5\%$  is available. NIST traceable calibration certificates are standard for improved accuracy ("H") models and optional for standard units.

### **FLUID CONNECTIONS**

All units have compression type tube fittings as standard. Many alternate fitting types and sizes may be selected as noted in the Fitting Availability Codes Chart.

### **ELECTRICAL CONNECTIONS**

Units have an integrated 4-pin male connector. To complete connections, either a cable assembly or power adapter should be ordered.

#### **WETTED MATERIALS**

The wetted materials vary depending on the model number. See the specifications for further details. Viton® O-Rings are fitted as standard.

#### **INTEGRATED DISPLAY**

A flow rate display is integrated into each unit and is programmed to read in mL/minute for ranges 3-6, and L/minute for flow ranges 7-10.

### **Specifications**

	Model S-111	Model S-112	Model S-114							
Accuracy (including linearity)	Standar	d: ±1.0% Full Scale • "H" suffix: ±0.5% Fu	ıll Scale							
Repeatability		±0.2% Full Scale								
Pressure Rating	100 psig	100 psig 500 psig								
Temperature Rating	Operating Range: 5 to 55°C • Storage Range: 0 to 70°C									
Temperature Sensitivity	±0.2% F.S. or less per °C									
Wetted Materials	Ryton® 316 Stainless Epoxy Glass Sapphire	Brass Ryton® 316 Stainless Epoxy Glass Sapphire	316 Stainless Ryton® Epoxy Glass Sapphire							
O-Ring Material	Standard: Viton®									
Fitting Material	Standard: Acetal Optional: Brass, Stainless Steel	Standard: Brass Optional: Acetal, Stainless Steel	Standard: Stainless Steel Optional: Acetal, Brass							
Recommended Filtration	25 microns or less									
Compatible fluids	Low viscosity (<10 cS) • Translucent or Transparent • Minimum amount of entrained air									
0-5 VDC Output Signal	Star	ndard • Non-Isolated, 2500 ohm minimum	oad							
Integrated Display		128x32 pixel backlit LCD								
Power	Standard: 12 VDC @ 7	75 mA (11.5-15 VDC) • "E" Suffix: 24 VDC	@ 40 mA (18-25 VDC)							
Response Time		Typically <1 second for 97% of final value								
Reliability		100,000 Hours MTBF (testing ongoing)								
Certifications	CE Approved • 89/336/I	CE Approved • 89/336/EEC (EN 55011 & EN 50082-1) • 73/23/EEC Low Voltage Directive								
Ratings		IP10 (NEMA 1)								

### **Dimensions**

### **Pressure Drop**

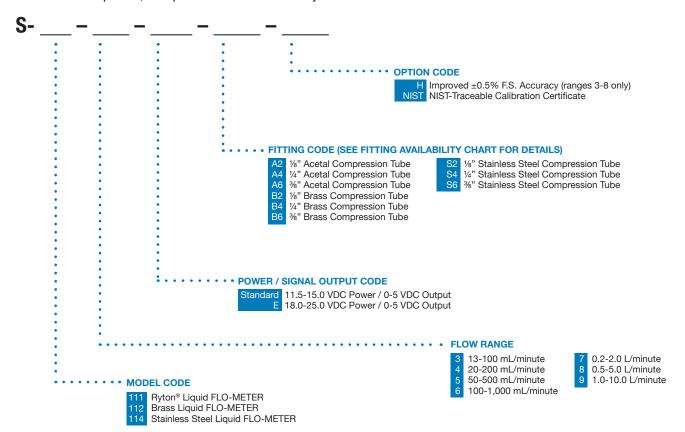

### **Ordering Information**

### Form part number:

Form part number: (Model Code) - (Flow Range)(Power) - (Fittings) - (Options) For standard options, no specification is necessary.

### **ACCESSORIES**

CABLES AND POWER Adapters	100-17T	Cable with pigtail leads, 36" (92 cm) length, 12/24 VDC Power Required					
	110-00-08T	110VAC Power Adapter (for 12 VDC Models only)					
	110-00-18T	230VAC Power Adapter (for 12 VDC Models only)					
BASE PLATE	110-00-17	Allows S-111 FLO-METER to stand on bench or table					

#### **EXAMPLES**

S-112-7E-B4-H would give you an S-112 FLO-METER rated for 0.2-2.0 L/minute. The full scale accuracy would be  $\pm 0.5\%$ . The power would be 24VDC, and the output would be 0-5VDC.  $\frac{1}{4}$ " brass compression tube fittings would be installed. An NIST-Traceable calibration certificate would be included due to the H suffix.

S-114-5-S6-NIST would give you a S-114 FLO-METER rated for 50-500 mL/minute. The full scale accuracy would be ±1.0%. The power would be 12VDC, and the output would be 0-5 VDC. 3/8" Stainless Steel compression tube fittings would be installed. An NIST-Traceable calibration certificate would be included.
